#### **Convolutional Neural Networks**

IN CS, IT CAN BE HARD TO EXPLAIN THE DIFFERENCE BETWEEN THE EASY AND THE VIRTUALLY IMPOSSIBLE.

## From Fully Connected to CNN

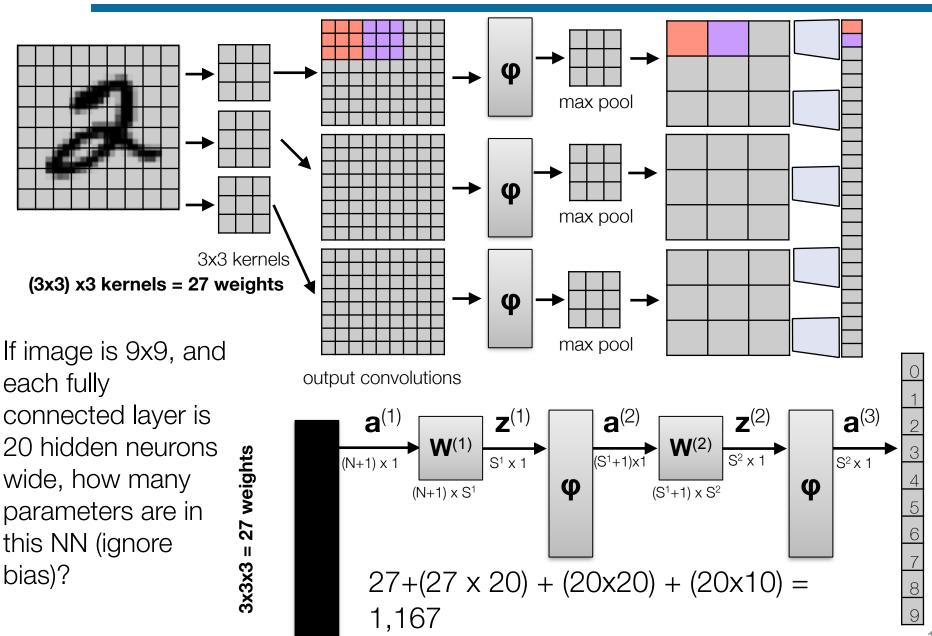

If image is 9x9, and each fully connected layer is 20 hidden neurons wide, how many parameters are in this NN (ignore bias)?

$$(K^2 \times 20) + (20 \times 20) + (20 \times 10) = 600 + 20 K^2$$

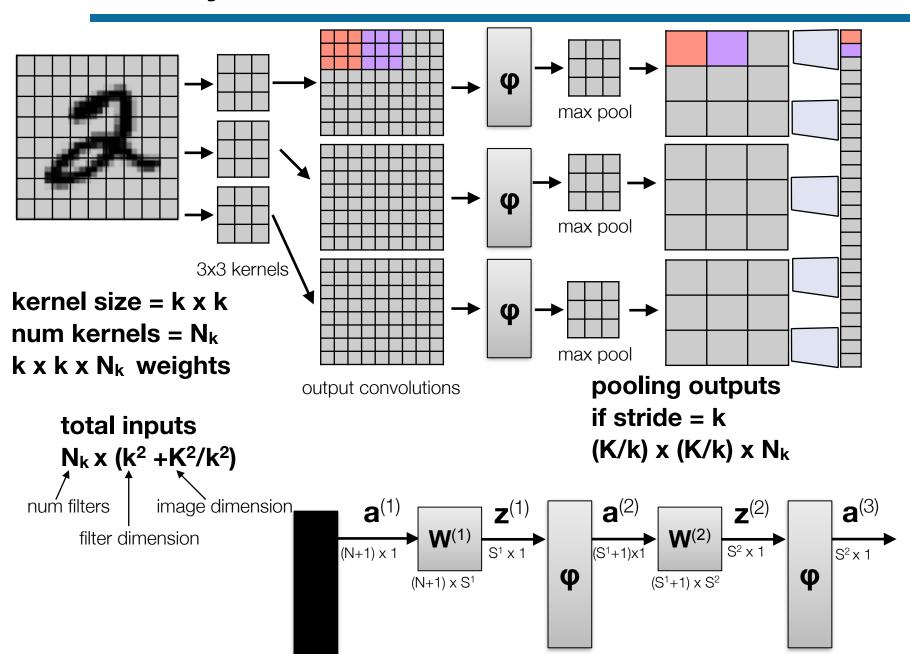

for 
$$9x9 = 600 + 20x9^2 = 2,220$$
